Hi all, according to the processes carried out in this case I will begin the detailed process step by step realization of a pen with stamps imported from America and I live in Spain I had to buy the stamps on ebay.

We begin by selecting the stamps for our pen

Once selected proceed to go sticking stamps one by one in the tube. The brass tube to be having problems with the glue, we solve painting the tube in my case I have painted black

Make a mixture of white-tailed (white glue) 80% and 20% water to affix stamps, adding a small amount of water ensures that the seal is not sticking instantly

We started to hit all the stamps in my case I hit the diagonal and one must be careful to not see any black color space, we must have patience, patience.....

Little by little we are moving forward, until the final result

now our pen is ready for casting polyester resin.
