Dismantling A Jr Emperor Clip

I am trying for a closed end Jnr. Emperor with invisible clip, here is how I pulled the clip apart.

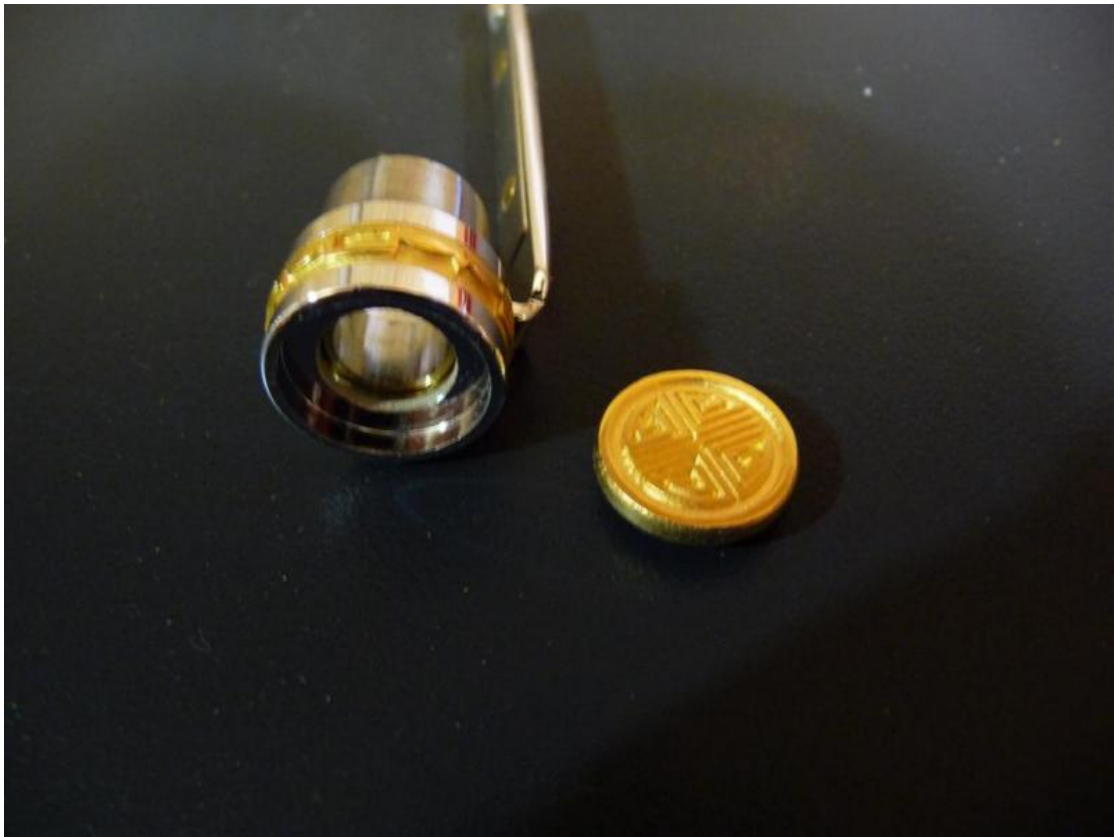

The clip as is.

The three step hole so I could punch out the cap.

The clip in the hole use a thin rod and punch out.

The end cap out

Now a small gap appears on the clip.

Another jig close to the end of the block a 12.5 mil hole place clip in it.

You can see small brass ring within the silver ring

I used the end of a 5/16 drill bit and a block of wood to punch out the brass bit

All apart

All apart

All apart

All apart close up

All apart close up

Just to get this!!!

And this!!

I use this principle on all my invisible clips.
